Quiz B for 1:00 Class: 1/30/13

Note: On this quiz, you do not need to solve anything. Just set up all the equations, plug in all the numbers you would need to solve the equations, and indicate which variable you are solving for (in each equation) if you are not solving for the equation itself.

Assume a security matures for $10,000 three years and ten months from today. Assume also that the security makes quarterly payments with the final quarterly payment also occurring three years and ten months from today. The next payment will equal $200 and subsequent payments will grow by 2% each. Finally, assume that the APR on investments with comparable risk equals 3.5% per year with monthly compounding. What is the most you should pay for this security today?

Wall Street Journal Questions are on the back of this page.
