

Quiz A for 4:00 Class: 9/10/12

Name _____

Assume that five months from today you plan to make the first of a series of nine monthly deposits into an account earning an APR of 9% with monthly compounding. The deposits will shrink by 0.5% each (after the first one). Three years from today, you plan to make the first of a series of five semiannual withdrawals from the account. The first withdrawal will equal \$400 and the withdrawals will grow by 0.25% each (after the first one). Set up the calculations to determine your first deposit. Note: You do not need to solve anything. Just set up all equations, plug in all the numbers you would need to solve the equations, and indicate which variable you are solving for (in each equation).
